

## Employment

- **Cox Automotive / VinSolutions** Mission, KS  
*Lead Software Engineer* *October 2017 - Present*
  - Lead a development team through building, maintaining and designing features for an industry leading CRM application.
  - Collaborated with product, engineering, architecture and leadership to present valuable solutions to long term projects and immediate concerns.
  - ASP.NET Core Web API, React and JavaScript front-end, WCF, Microsoft SQL Server.
  - Design stable, secure and scalable systems in AWS and on-premise hardware.
  - Designed and implemented Disaster Recovery strategy across all teams. Received quarterly Engineering award for effort.
  - Promote a major engineering effort to decouple a piece of functionality across the organization through communication, documentation and mentorship.
  - Build serverless Docker micro services running in AWS ECS and Fargate.
  - Use pub/sub messaging patterns for resiliency with Amazon SQS, SNS, and MSMQ.
  - Script out deployments in AWS using Terraform and PowerShell in Jenkins and Octopus.
  - Mentored team members daily and others through the company mentorship program.
  - Participated in Company Hackathons, utilizing Alexa, Lambda, and React Native.
- **Site 1001** Kansas City, MO  
*Senior Software Development Engineer* *October 2016 - October 2017*
  - Build and maintain a data-driven facility management application aspiring to incorporate AI, Machine Learning and IoT technology.
  - MVC Web Application with Entity Framework, RESTful Web API, Microsoft SQL Server.
  - Client-side application utilized Razor syntax and component-based jQuery.
  - Develop a Mobile application for iOS and Android using Xamarin.
  - Design and implement architectural changes throughout all layers of the application to improve performance and code quality while minimizing technical debt.
  - Mentor and collaborate with a small team of developers in a fast-paced development cycle. Design features and work with various lines of the company to iterate effectively.
  - Developed Windows services to integrate with third party smart sensors and IoT devices.
  - Upgraded enterprise application tools and dependencies: MVC2 to MVC5, .NET Framework 4 to .NET Framework 4.5.2, Web Forms views to Razor views and Visual Studio 2010 to 2017.
- **Bradford & Galt / Heartland Crop Insurance** Overland Park, KS  
*Software Engineer* *November 2015 - October 2016*
  - Design and support systems in a mathematically intensive, enterprise level insurance application in .NET using C# 6.
  - Maintain stored procedures and views in Microsoft SQL Server with NHibernate as the ORM.
  - Set up a specialized unit and regression testing environment using NUnit.
- **Artisan Technology Group / Beyond the Scores** Kansas City, MO  
*Software Engineer* *May 2015 - November 2015*
  - Develop an enterprise application as a greenfield project from the ground up with a team of mostly two developers. Involved in modeling, design, development and architecture.
  - C# .NET 4.5 Windows Presentation Foundation (WPF) following the MVVM pattern.
  - Communicate directly with clients on consulting projects, supporting their products, developing new features, and advising on architectural concerns.

- **PeopleAdmin / Netchemia**

Prairie Village, KS

- *Software Engineer*

August 2013 - May 2015

- Develop features in C# MVC and VB.NET Web Forms products. Additional technologies included Microsoft SQL Server, AngularJS, JQuery, KnockoutJS and JavaScript.
- Product Owner, handling issue resolution, delegating, testing, requirements and code review.
- Work directly with an off-shore team to ensure quality support for the product.
- Led a cross-organization team of seven to win the first internal company hackathon, establishing a company intranet.
